

ALON SHORER

Software Engineering Student (B.Sc.)

050-739-4402 | alonshorer54@gmail.com | github.com/alonshorer54 | linkedin.com/in/alon-shorer | alon-shorer.vercel.app

PROFILE

Software Engineering student at Afeka Tel Aviv Academic College of Engineering, two of four years completed, with **3+ years of experience as a data analyst** in the IDF and the private sector. Builds and ships real software end-to-end, from idea to a deployed, working product, all public on GitHub. A fast learner with strong communication skills and an eye for detail without losing sight of the bigger picture.

TECHNICAL SKILLS

Programming Languages: Java, Python, C, Assembly, R

Foundations & Tools: Data Structures & Algorithms, OOP & Design Patterns, Git, Linux

PROJECTS

Teams FC — Football Squad Manager — React, TypeScript, Supabase · live in production

- Built and deployed a full-stack PWA that manages a recurring football group — player roster, balanced three-team draw with prefers-with / prefers-without constraints, weekly history, payments and WhatsApp export. Used every week to organize my own football group's games.
- Under the hood the draw is an optimization problem: it groups friends into clusters, then balances the teams by rating and personal preferences using local search over repeated attempts.
- Supabase backend with authentication, realtime cross-device sync and Row Level Security, offline-first fallback to localStorage, and continuous deployment from main to Netlify, with keys held as site environment variables.

Football Player Position Classifier — Python, scikit-learn

- Supervised ML pipeline classifying ~18,400 players into four position groups from 29 attributes, reaching 89% accuracy on a held-out test set.
- Stratified split inside a scikit-learn Pipeline with StandardScaler to prevent data leakage, evaluated with macro precision/recall and a confusion matrix.

College Management System — Java

- Console-based system for managing lecturers, departments and committees — structured with the Facade, Factory Method and Singleton patterns, with serialization-based persistence saved via a JVM shutdown hook.

WORK EXPERIENCE

Data Analyst — Milgapo

2023

- Built management dashboards from multiple data sources using SQL and advanced Excel.

Data Analyst — Human-Resource Planning Corps, IDF (Military Service)

2019 – 2022

- Analyzed large-scale datasets serving multiple IDF units and owned the monthly reporting and presentations to senior officers, keeping the officers' manpower budget on plan.
- **Awarded the Unit's Outstanding Soldier Certificate, March 2021.**

EDUCATION

B.Sc. in Software Engineering — Afeka Tel Aviv Academic College of Engineering (Cyber track)

2024 – Expected 2028

Relevant Coursework: Object-Oriented Programming & Design • Design Patterns • Data Structures & Algorithms • Systems Programming in C • Computer Networks • Information Security • Development Tools (Linux, Git, Docker) • Requirements Engineering • Introduction to Artificial Intelligence.

Languages: Hebrew — Native | English — Highly proficient
